

Technodrain

Technologie pour un drainage de surface
Technologies for linear drainage

TARIF / PRICE LIST
2013 / 01

CARACTÉRISTIQUES PRINCIPALES

MAIN CHARACTERISTICS

POINTS DE PASSAGE DES VIS

Screw thread mountings

Points pour le passage des vis fermés par un diaphragme approprié, à ouvrir seulement en cas de nécessité afin d'éviter toute infiltration d'eau à l'extérieur du caniveau.

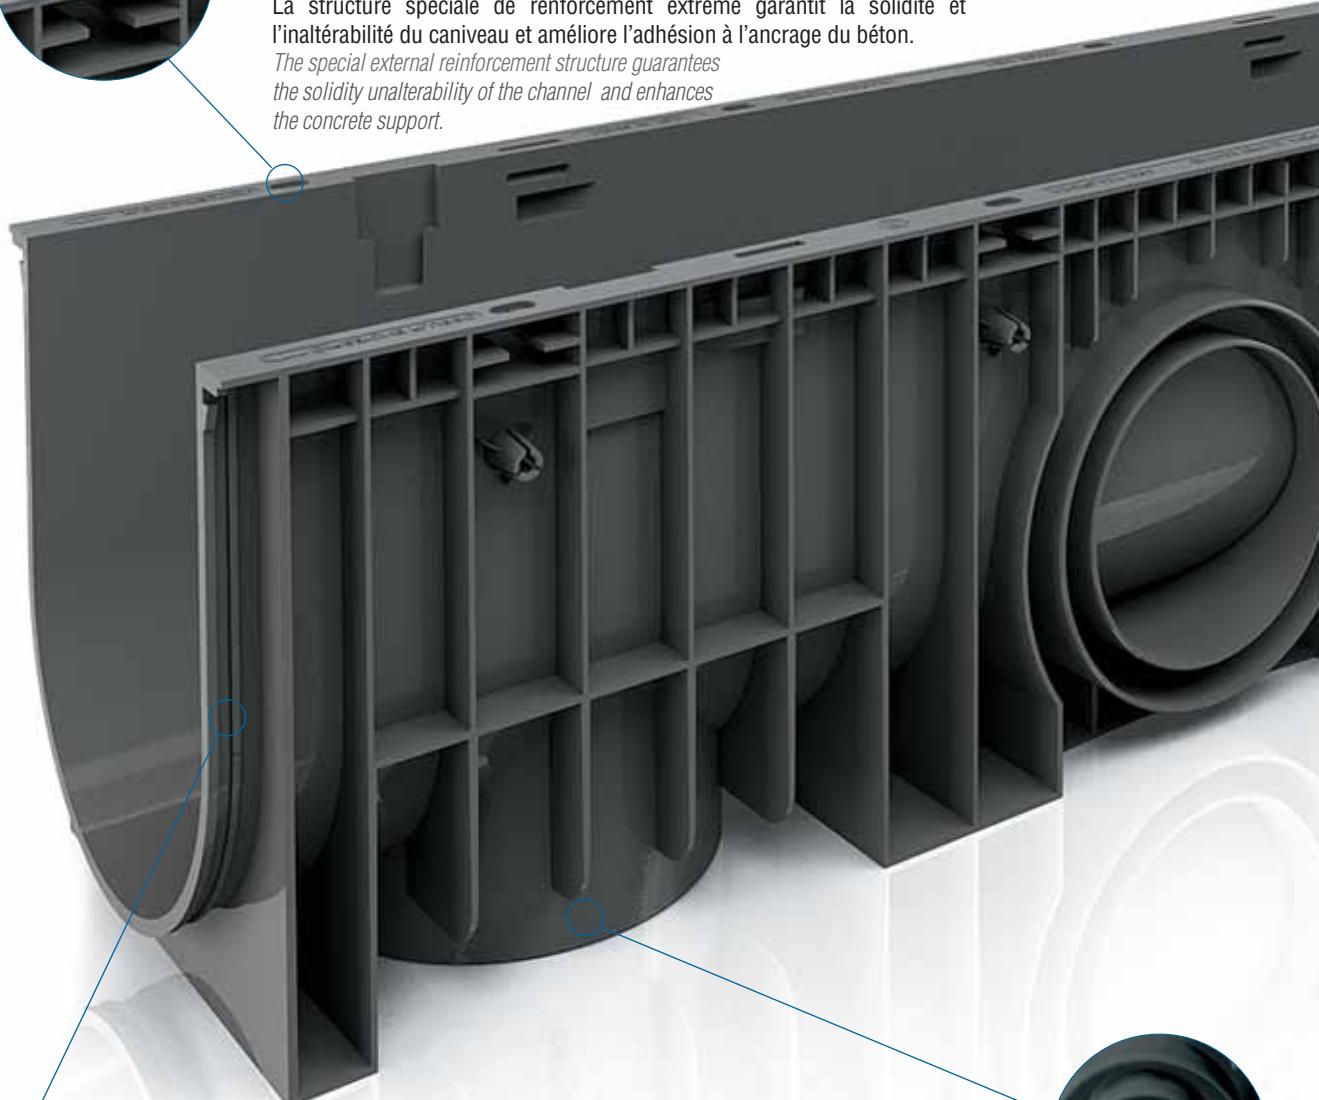

Mountings for the threading of screws closed by the appropriate diaphragm, to be opened only if necessary to avoid water infiltration external to the channel.

STRUCTURE EXTERIEURE DE RENFORCEMENT

External reinforcing structure

La structure spéciale de renforcement extrême garantit la solidité et l'inaltérabilité du caniveau et améliore l'adhésion à l'ancrage du béton.

The special external reinforcement structure guarantees the solidity unalterability of the channel and enhances the concrete support.

ENCASTREMENT MÂLE/FEMELLE

Groove and tongue joint

Permet l'installation des caniveaux avec grille déjà fixée. Gain de temps sur les chantiers et fixations plus affinées.

Allows for the installation of channels with a ready-mounted grating. Saving you time on site and supplying more accurate fixings.

EVACUATIONS JUSQU'A Ø 250

Drains up to Ø 250

Tous les caniveaux Technodrain sont conçus pour des évacuations latérales et verticales jusqu'à Ø 250 (Magnum). Quelques minutes pour relier la sortie au tuyau d'écoulement.

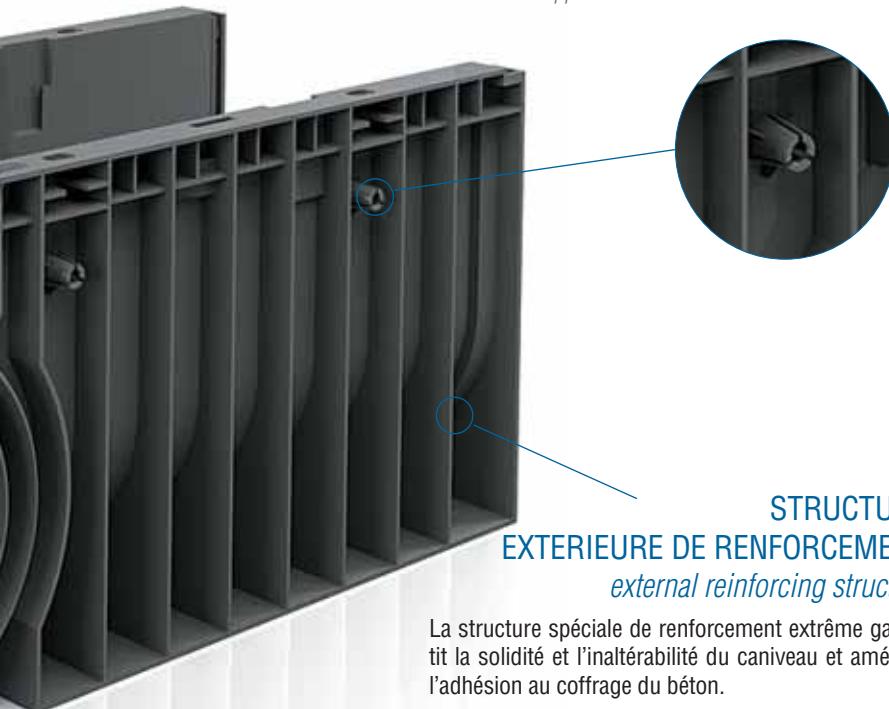

All Technodrain units are equipped with lateral and vertical drains up to Ø 250 (Magnum). It just takes a few minutes to hook up the drains to the run off pipes.

TECHNODRAIN SYSTEM

SUPPORT POUR ANCRAJE CANIVEAU housing for channel anchorage (Magnum, 200HV)

Certains modèles de Technodrain possèdent des supports pour l'adaptation de barres/ accessoires permettant d'augmenter l'ancrage au coffrage du béton.

Some Technodrain models, have housing for the insertion of bars/accessories on the main channel, in order to increase the anchorage of the concrete support.

STRUCTURE EXTERIEURE DE RENFORCEMENT external reinforcing structure

La structure spéciale de renforcement extrême garantit la solidité et l'inaltérabilité du caniveau et améliore l'adhésion au coffrage du béton.

The special external reinforcement structure guarantees the solidity unalterability of the channel and enhances the concrete support.

SYSTÈME DE DRAINAGE TECHNODRAIN

Drainage System Technodrain

Technodrain représente la synthèse de l'expérience Asoplast dans le domaine du drainage. Toutes nos solutions sont conçues pour fournir à l'utilisateur final un produit nouveau, sûr et simple à installer.

Le PE-HD (polyéthylène haute densité) avec lequel il est réalisé le rend léger et immunisé contre les attaques climatiques et chimiques, tout en garantissant la solidité et l'inaltérabilité de sa structure.

Le système Technodrain est conforme à la réglementation sur les systèmes de drainage EN 1433.

Technodrain embodies the synthesis of Asoplast experience in the field of drainage. All solutions are conceived to supply the end customer with an innovative product that is easy to install. The PE-HD (high density polythene) with which it is manufactured renders it light and immune to climatic and chemical attack, guaranteeing the solidity and unalterability of its structure.

The Technodrain system is manufactured in accordance with the Standard EN1433 on drainage systems.

Resistance aux produits chimiques

Chemical Resistance List

| | |
|---|--------------------------------------|
| Quelques unes des substances auxquelles le PEHD résiste / Some of many substances, that do not alter the performance of HD-PE | |
| Acide chlorhydrique Hydrochloric acid | Essence Petrol |
| Acide sulfurique Sulfuric acid | Huiles minérale Mineral oil |
| Acide acétique Acetic acid | Chlorure de sodium Sodium chloride |
| Alcool éthylique Ethylic alcohol | Phosphate de sodium Sodium phosphate |
| Ammoniac Ammonia | Soude caustique Sodium hydroxide |
| Sels antigel Antifreeze salts | Gasoil Diesel |
| Solutions savonneuses et produits pour le nettoyage industriel Soaps solutions and any industrial cleaning products | |

Notre bureau technique est à votre disposition pour toute information sur d'autres substances ou produits chimiques / Our Technical Department is to your disposal to give you deep information about other chemical substances and compounds

SIPHON Siphon

En complément au système, l'avaloir Technodrain est formé d'un bloc et d'un système de siphon démontable. Une fois l'installation réalisée, l'avaloir est parfaitement intégré à la ligne de drainage.

Complementary to this system is the Technodrain sump, composed of a body and a dismountable siphon system. The sump can be integrated perfectly with the drainage line.

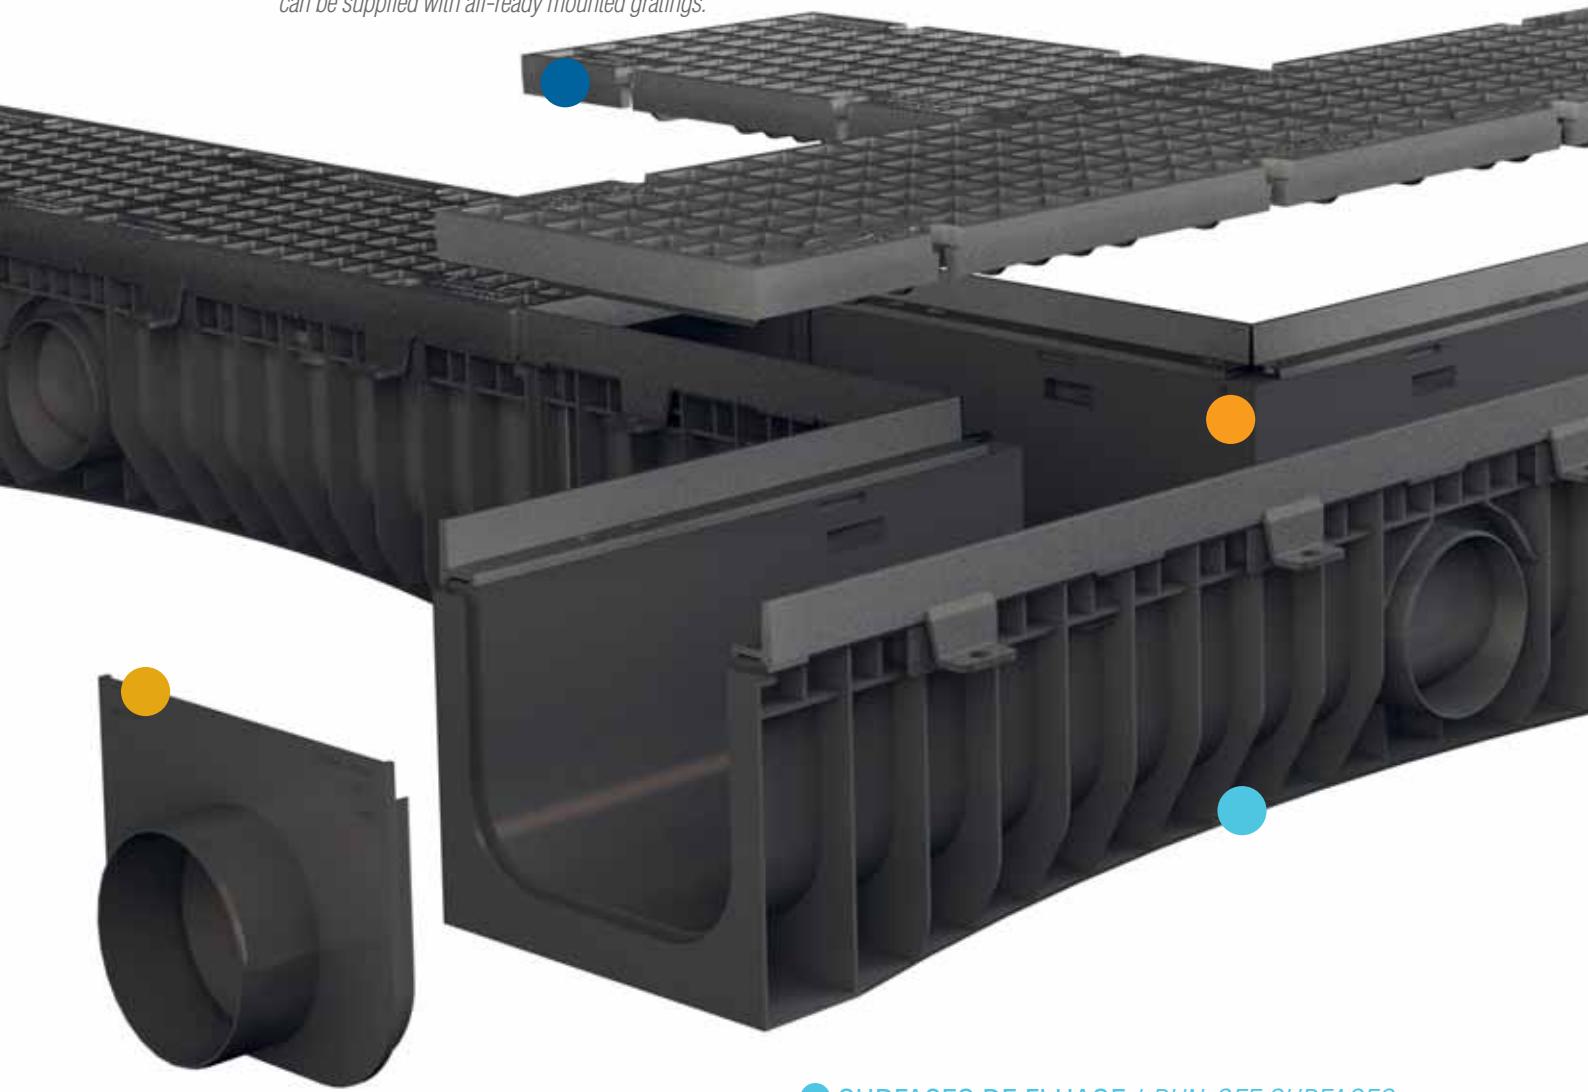

- A. Avaloir Sump
- B. Couvercle siphon Siphon cover
- C. Filtre dégrilleur Filter
- D. Grille Grating

LES AVANTAGES DU SYSTÈME ADVANTAGES OF THE SYSTEM

● GRILLES / GRATINGS

Le système Technodrain est composé d'une vaste gamme de grilles pour toutes les classes de résistance (A15 - F900) selon EN1433. Les matériaux disponibles sont : PE-HD, acier galvanisé et inox, fonte ductile. Toutes les grilles sont conçues pour obtenir la meilleure efficacité de drainage et la meilleure sécurité pour le passage de véhicules, de piétons et de bicyclettes. Le système Technodrain peut être fourni avec des grilles déjà fixées.

The Technodrain system is composed of a vast range of gratings for all load classes (A15-F900), in accordance with European Standard EN1433. The available materials are: PE-HD, galvanized and stainless steel and nodular ductile iron. All the gratings are designed to obtain the maximum drainage efficiency for traffic and the passing of pedestrians and cyclists. The Technodrain system can be supplied with all-ready mounted gratings.

● OBTURATEURS / END CAP

Les obturateurs des caniveaux Technodrain sont utilisés pour fermer la ligne de drainage ou pour installer une évacuation en ligne. Ils peuvent être fixés dans les lieux appropriés à l'extrémité du caniveau, y compris en cas de longueur partielle du caniveau.

The channel end caps are used to close the line of drainage or to install a discharge into the line. They can be installed in the appropriate housing at the edge of the channel in the case of partial length of the channel.

● SURFACES DE FLUAGE / RUN-OFF SURFACES

La surface intérieure du caniveau, grâce à la géométrie et au PE-HD qui le compose, garantit une résistance et une inaltérabilité à une large gamme de substances chimiques ainsi que des critères d'hygiène contre les moisissures et les micro-organismes.

Coefficient de fluage élevé. La surface interne du caniveau Technodrain ne crée aucun obstacle à l'écoulement de l'eau et réduit au minimum le dépôt de matières inertes.

The internal surfaces of the channel, thanks to geometry and the PE-HD with which it is built, guarantees resistance and unalterability to a large range of chemical substances, hygiene products used to counter mould and micro-organisms. It has a high run-off coefficient. The internal surface of the Technodrain unit does not hinder the flow of water and minimizes inert deposits.

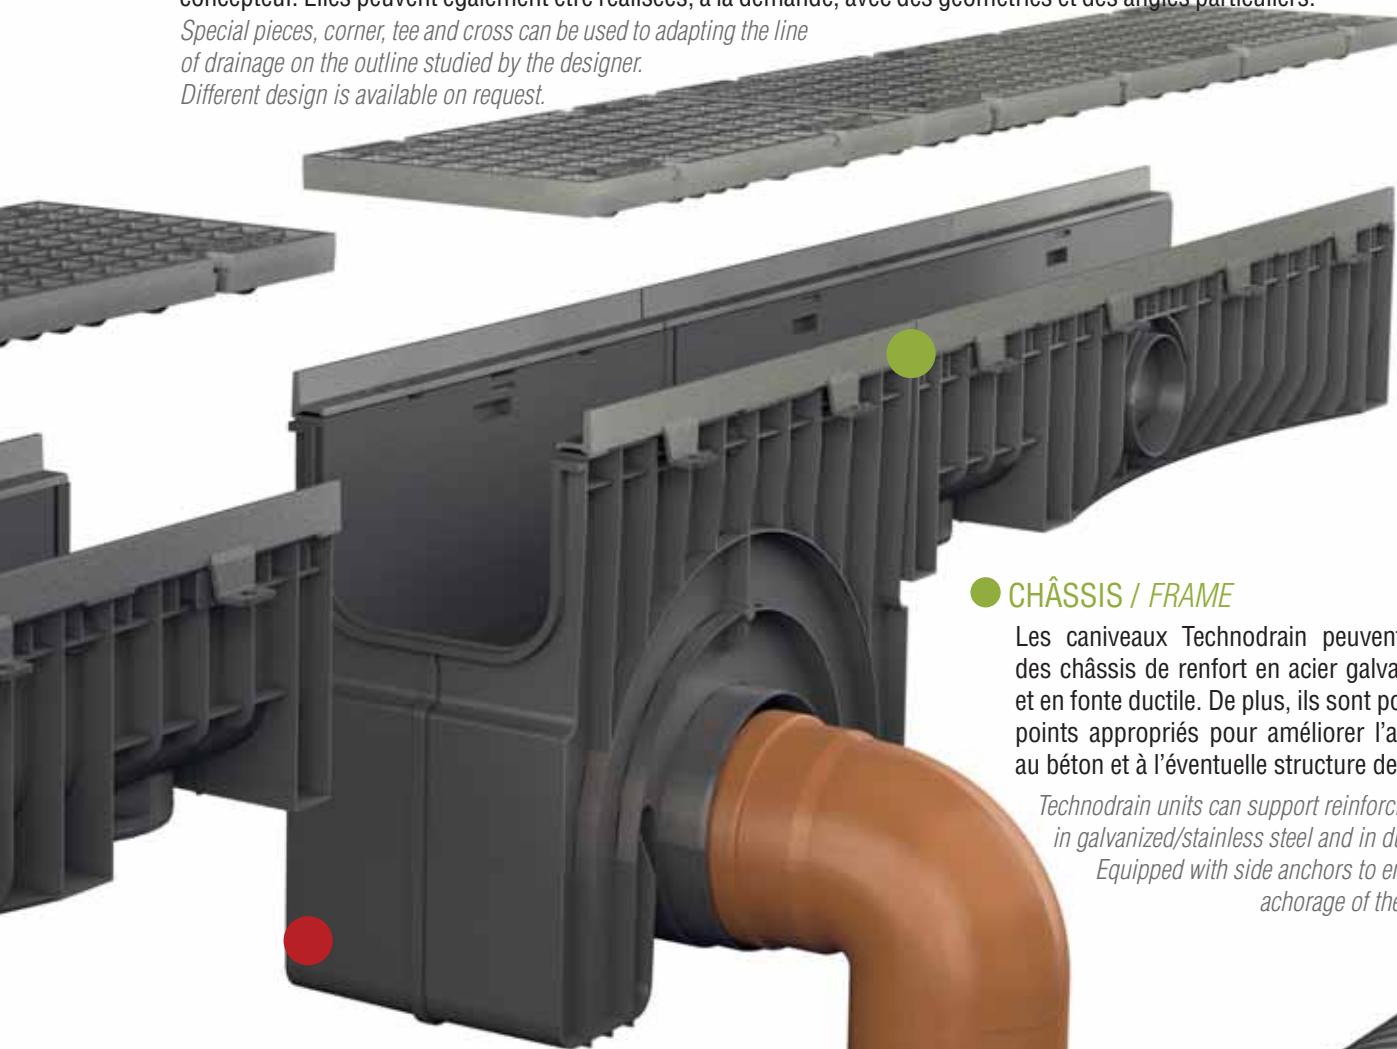

TECHNODRAIN SYSTEM

● PIÈCES SPÉCIALES / SPECIAL PIECES

Les pièces spéciales, angles, T et croix sont utilisés pour adapter la ligne de drainage au parcours étudié par le concepteur. Elles peuvent également être réalisées, à la demande, avec des géométries et des angles particuliers.

Special pieces, corner, tee and cross can be used to adapting the line of drainage on the outline studied by the designer.

Different design is available on request.

● AVALOIR / SUMP UNIT

L'avaloir Technodrain est un composant important du système, il peut être installé comme élément final de la ligne ou comme élément central de deux lignes convergentes. L'avaloir est équipé d'un siphon anti-odeur qui peut être enlevé très facilement pour faciliter son nettoyage et d'une grille pour filtrer les feuilles et les détritus. L'utilisation de l'avaloir permet d'augmenter le diamètre d'écoulement pour tous les caniveaux jusqu'au Ø 200.

The Technodrain sump is an important component of the system. It can be installed as terminal unit of the line or as a central element of two converging lines. The sump is equipped with anti-odour siphon that can be removed easily for cleaning purposes and a grating to filter leaves and detritus. Use of the sump allows you to increase the out-flow diameter of all channels up to Ø 200.

● CHÂSSIS / FRAME

Les caniveaux Technodrain peuvent monter des châssis de renfort en acier galvanisé/inox et en fonte ductile. De plus, ils sont pourvus de points appropriés pour améliorer l'adhérence au béton et à l'éventuelle structure de renfort.

Technodrain units can support reinforcing frames in galvanized/stainless steel and in ductile iron.

Equipped with side anchors to enhance the anchorage of the concrete.

TECHNODRAIN SYSTEM

CONSEILS POUR LA POSE DU SYSTEME DE DRAINAGE TECHNODRAIN (EN 1433 type M) RECOMMENDATIONS FOR THE INSTALLATION OF THE TECHNODRAIN SYSTEM (EN 1433 TYPE M)

Phase 1 - Classe de charge requise

La première phase de la conception d'un système de drainage part de l'analyse du type de couvertures/grilles et caniveaux à utiliser en fonction des caractéristiques requises. Ces dernières sont choisies en fonction de la résistance et des charges que la ligne de drainage doit garantir, des matériaux prévus par le projet de l'architecte et/ou le projet technique (exemple : grille avec fente de sécurité aux barres resserrées), la surface libre de drainage en lien avec le dimensionnement hydraulique, le matériel technique (exemple : grilles en acier inox).

Les classes de charge prévues pour les systèmes de drainage linéaire sont indiquées par la norme EN 1433 qui indique également les caractéristiques techniques des caniveaux en fonction des charges (exemple : présence et épaisseur des châssis métalliques).

En cas de passage de véhicules, il faut vérifier à quelle vitesse ils pourront passer et choisir en conséquence le type de grilles et de fixations ; les véhicules rapides ou qui braquent ou freinent sur les grilles appliquent une charge dynamique plus importante que dans le cas d'une simple charge statique. Un cas très répandu : le caniveau placé au fond d'une rampe d'accès ou d'un passage souterrain.

Il faut en outre tenir compte d'éventuelles utilisations futures ou exceptionnelles du site à concevoir, une zone rarement ou exceptionnellement soumise à des charges lourdes ou dynamiques (exemple : passage de camions de pompiers, déchargement de marchandises, passage de chariots élévateurs et de transpalettes) doit être équipée de caniveaux et de grilles adaptés à cette utilisation, la roue d'un chariot élévateur ou d'une transpalette applique une charge plus concentrée que celle d'un autre véhicule du même poids.

Step 1 – Requested load class

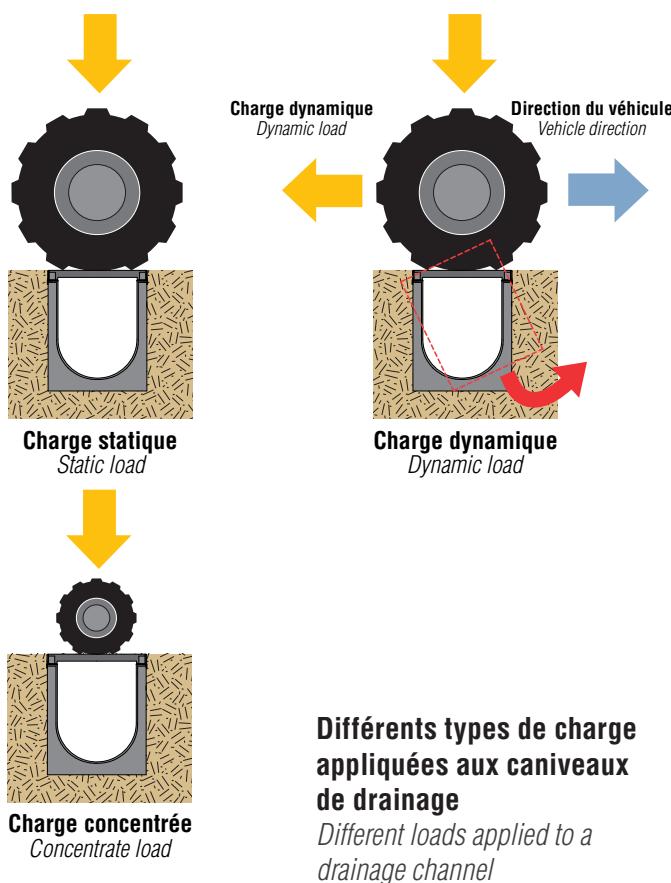

The first step of the design of the drainage system start from the covers/gratings and channels to use on the basis of which characteristics are necessary.

They are chosen on the basis of resistance to loads that the line of drainage must guarantee, materials foreseen from the architectural and technical project (e.g. anti heel grating), free drainage surface in relation to hydraulic sizing, technical materials (e.g. stainless steel gratings).

Load classes foreseen for linear drainage systems are identified in the Standard EN 1433 that shows the technical characteristics of the drains in relation to the loads, (e.g. presence and thickness of metallic frames). In the case vehicle traffic we must inspect the speed they can support and consequently choose the type of grating and fastenings, vehicles travelling at high speed or ones that steer and brake on the gratings apply a more impregnating dynamic load than a simple static load.

A very common case is the channel located on an access ramp or in an underpass.

It is necessary to pay attention to possible future uses of the project site, an area that is rarely subjected to, or in specific cases, to heavy and dynamic loads (e.g. passing of Fire Engine, goods unloading, forklift trucks) has to be furnished with the appropriate channels and gratings for the most sustainable demanding use, the wheel of a forklift applies a more concentrated load to the ground with regards to a vehicle of the same weight.

Classes de charge avec des modèles de caniveaux recommandés Loading Class with recommended channels (EN1433)

A 15 • Zones piétonnes, parcs et jardins, équipements sportifs, pistes cyclables *Pedestrian areas, parks and gardens, sporting installations and cycle paths*
(Recommandé Recommended NEO/EVO)

B 125 • Trottoirs, parkings de zones résidentielles et en hauteur *Pavements, residential-parking areas and multi-storey car parks*
(Recommandé Recommended NEOMAX/EVOMAX)

C 250 • Parkings automobiles, drainage bord de route *Car parking, roadside drainage*
(Recommandé Recommended EVOMAX/EXEL/MAGNUMCITY)

D 400 • Routes, passages, zones commerciales et zones de stationnement pour véhicules lourds *Carriageways, crossings, commercial areas and areas where heavy vehicles parkings*
(Recommandé Recommended EXEL/PRO/PROMAX/MAGNUMTRAFFIC)

E 600 / F 900 • Zones portuaires et aéroportuaires, zones industrielles avec passage de chariots élévateurs *Port and airport areas, industrial areas with traffic of forklift trucks*
(Recommandé Recommended PROMAX/MAGNUMTRAFFIC)

TECHNODRAIN SYSTEM

Phase2-Dimensionnement hydraulique du système de drainage

Le système de collecte et d'évacuation des eaux (caniveau + tuyau d'écoulement) doit être dimensionné en fonction des caractéristiques pluviométriques et météorologiques du site concerné, de la surface, de la forme et de la pente de la zone de collecte, du type de revêtement utilisé pour le sol (asphalte, béton, dallage, etc.), de l'utilisation de la zone (civile, industrielle), d'éventuelles caractéristiques agressives du liquide à évacuer.

Il faut tout particulièrement tenir compte des routes d'accès ou des couvertures qui permettent à l'eau de se déverser directement dans la zone à drainer, dans ce cas la zone à considérer pour le calcul du drainage devra être la somme de toutes ces composantes (place, éventuelles voies d'accès, couvertures). Il faudra, en outre, prendre en considération le récent changement climatique qui entraîne une plus grande fréquence de précipitations de courte durée mais de très forte intensité, susceptibles de saturer en très peu de temps les réseaux de drainage existants. Pour cette raison, il faudra prendre en considération un coefficient de sécurité adapté et l'appliquer à la capacité de drainage maximale du système choisi.

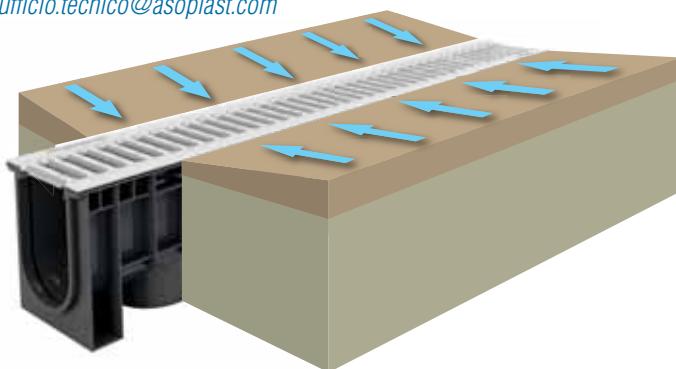

Notre bureau technique est à votre disposition pour un dimensionnement rapide et correct du système de drainage et pour tous conseils sur les types de caniveaux et de grilles Technodrain à utiliser; vous pouvez nous contacter par téléphone/fax ou par email à l'adresse ufficio.tecnico@asoplast.com

of the relevant site, form and sloping on the collection area, type of paving used (asphalt, concrete, paving stones, etc.), possible aggressive characteristics of disposable liquid.

Attention must be paid to access roads that can pour water directly into the drainage area, in this case the area considered for drainage must be the sum of all these components (open-area, possible access routes, coverings).

It will also be necessary to consider recent climate change that entails frequency of rain of short duration but high intensity, capable of saturating the existing drainage networks in short time. For this reason, an appropriate security coefficient will have to be considered, to be applied to the maximum drainage capacity of the system chosen.

Our technical office is always available for a correct and rapid sizing of the drainage system and for all advice on Technodrain channels and gratings to be installed, you can contact us by telephone/fax or by e-mail: ufficio.tecnico@asoplast.com

Step 2 – Hydraulic sizing of the drainage system

The water collection and disposal system (channel + outflow pipes) should be sized according to the pluviometric and meteorological characteristics

TECHNODRAIN SYSTEM

Phase 3 - Pose Step 3 – Installation

Le caniveau Technodrain est un caniveau de type M (EN 1433), il nécessite donc d'un coffrage en béton d'une épaisseur suffisante pour répartir les charges d'impulsion verticales ou horizontales.

The Technodrain is a type M (EN 1433) channel, therefore it needs a concrete support with adequate depth to distribute the vertical and horizontal loads.

A. Préparation du lit de pose, dimensionnement de la tranchée

Preparation of the installation area, measuring of the excavation area:

La tranchée pour l'installation du système de drainage Technodrain doit être dimensionnée en tenant compte de l'espace extérieur du caniveau choisi et des épaisseurs nécessaires de béton. Voir à ce propos le tableau 1 avec les épaisseurs S et R.

Outre les épaisseurs R et S; la tranchée doit prévoir le passage éventuel de tuyaux pour l'évacuation.

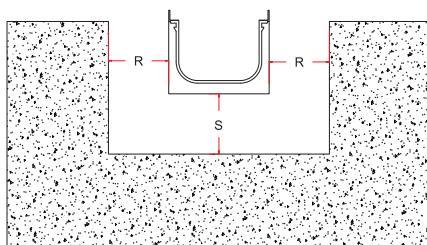

Le lit de pose doit avoir une capacité portante adaptée aux classes de charge prévues; cette capacité peut être augmentée en damant la surface de pose ou en armant le lit de pose et éventuellement le coffrage en béton par l'utilisation d'un treillis ou de ronds d'acier. Le renforcement à l'aide d'une armature est fortement conseillé en cas de circulation importante de véhicules ou d'autres charges concentrées (E600 - F900).

The excavation/trench for the installation of a technodrain drainage system, should be measured considering the external blocking of the channel and of the necessary depths of concrete for the support and the foundation described in Table 1, as well as the above depths R and S. The excavation must foresee the size of possible out-flow pipes.

The installation area must have a load-bearing capacity that is in line with the foreseen load classes, this can be increased by adequately tramping the installation surface or reinforcing the foundation and possibly the concrete support with electro-welded net or steel reinforcing rods. Reinforcement is highly recommended for cases of high vehicular traffic or high concentrated loads (E600 – F900).

Tab. 1. Epaisseur conseillée pour les fondations et la coulée de béton en fonction des classes de charge
Recommended depth for foundation and concrete support in relation to the loading class

| Loading Class Loading Class EN 1433 | A15 | B125 | C250 | D400 | E600 | F900 |
|---|-------------------------|-------------------------|-------------------------|--------------------------|--------------------------|--------------------------|
| Classes de charge EN 1433 (kN) <i>Applicable load EN 1433 (kN)</i> | 15 | 125 | 250 | 400 | 600 | 900 |
| S - épaisseur lit de pose <i>depth of foundation (mm)</i> | 100 | 100 | 150 | 200 | 250 | 250 |
| R - épaisseur coffrage <i>depth of support (mm)</i> | 100 | 100 | 150 | 200 | 250 | 250 |
| Classe de résistance béton Resistance class concrete (EN 206-1) | C 20/25 C 30/37 XF4* | C 25/30 C 30/37 XF4* | C 25/30 C 30/37 XF4* | C 30/37 C 35/45 XF4 * | C 30/37 C 35/45 XF4 * | C 35/45 C 40/50 XF4 * |

*à utiliser en cas de béton soumis à des cycles de gel/dégel. To be used in cases where concrete is exposed to cycles of freezing and thaw.

TECHNODRAIN SYSTEM

B. Fondations en béton *Concrete foundation*

Sur l'appui au mortier, il faut avoir préparé a lit de pose en béton d'une épaisseur correspondante à S, le béton à utiliser pour le fondation et pour l'enrochement des caniveaux Technodrain doit posséder des caractéristiques de fluidité capables de favoriser le remplissage de toutes les cavités formées par les nervures extérieures de renfort du caniveau (S4 - EN 206-01), c'est aussi pour cette raison que la dimension des matières inertes qui composent le béton ne doit pas dépasser le diamètre de 15-18 mm.

La classe de résistance minimale du béton pour le fondation et pour le coffrage doit être adaptée à la classe de charge prévue. Il peut s'avérer utile d'utiliser des mortiers pré-mélangés présents sur le marché, tels que Mapegrout SV, SikagROUT 312 A ou Emaco Ultra Rapid. Pour des installations à effectuer dans un environnement à basses températures, on peut utiliser Emaco Fast. Ces mortiers garantissent en outre un faible retrait volumétrique du béton et réduisent le temps de passage de la ligne de drainage, pour des ouvrages nécessitant une utilisation immédiate, on peut utiliser des mortiers pré-mélangés de type Si kaPatch-4.

Au cours de cette phase, il faudra éventuellement réaliser des pentes sur la ligne de drainage.

The installation area must be have a concrete foundation of S depth, the concrete used for the foundation and the support of the Technodrain unit must possess fluid characteristics capable of encouraging the filling of all the cavities formed by the reinforcement structure of the channel (S4 – EN 206-01), for this same reason, the size of stone aggregates in

the concrete must not go over a 15-18 mm diameter.

The minimum resistance class of concrete for the foundation must be compatible with the foreseen loading class. It might be useful to use pre-mixed mortar that can be found on the market, such as Mapegrout SV, SikagROUT 312 A or Emaco Ultra rapid. For installations at low temperatures you can use Emaco Rapid. These types of mortars, guarantee low volumetric shrinkage of the concrete and reduces the time necessary for the negotiability of the drainage line, in circumstances that require the immediate passage of vehicular activity on completion of the installation it is advised to utilize the pre-mixed mortar SiksPatch-4. Possible sloping of the drainage line will have to be carried out.

C. Installation du caniveau *Channel installation*

Pour une bonne installation du caniveau Technodrain il faut commencer la pose à partir du point de déversement (avaloir), en reliant la sortie au réseau d'assainissement ou au système de traitement des eaux de pluie.

Pour une parfaite étanchéité hydraulique du raccordement mâle/femelle du caniveau Technodrain, on peut utiliser une préparation isolante thixotropique à base bitumineuse.

Le caniveau Technodrain peut être installé avec les grilles déjà fixées, il est donc conseillé d'effectuer cette opération avant, en accordant le plus grand soin à positionner correctement les grilles sur le caniveau et à serrer correctement les vis pour la fixation.

Dans tous les cas, afin d'éviter toute déformation au bord du caniveau avec les difficultés d'encastrement de la grille qui pourraient en découler, il est extrêmement important d'insérer les grilles avant d'effectuer la coulée de béton.

Au cours de l'installation, éviter d'endommager les grilles et/ou le bord de caniveau par des outils mécaniques en service, en adoptant les dispositifs de sécurité opportuns.

To correctly install the Technodrain unit, begin installation from the out-flow point (sump), connecting the sewage exit or the rainwater treatment system.

For a perfect hydraulic hold of Technodrain unit groove and tongue joint you can use a bituminous based thixotropic sealant (Shell Tixophalte).

The Technodrain units can be installed with pre-mounted gratings, therefore it is recommended to carry out this procedure prior to the final installation, taking special precautions on the positioning of the gratings and tightening of the screws/bolts (fixing elements).

In every case it is extremely important to insert the gratings prior to applying the concrete support, so as to avoid deformation on the sides of the channel which can lead to difficulties in the installation of the gratings. During installation avoid possible damage to the gratings and/or the side of the channel caused by the movement of mechanical vehicles adopting the satisfactory precautions.

TECHNODRAIN SYSTEM

D. Revêtement final Final coating

Le caniveau Technodrain bénéficiera donc d'un coffrage en béton pour une épaisseur R jusqu'à la hauteur prévue par le revêtement final et par le projet spécifique.

Il est important que le sol avec son revêtement final reste 3 à 5 mm au-dessus du plan d'écoulement de la grille.

Pour toutes les classes de charge et plus particulièrement pour la classe C250 et supérieures, le revêtement en béton doit protéger latéralement le sol fini de la grille, par une épaisseur adaptée.

En cas de revêtement soumis à des forces horizontales, il est nécessaire de prévoir des joints de dilatation latéralement à la ligne de drainage selon le projet et à distance minimum de 100 cm

Il est important que le béton atteigne une bonne maturation avant de soumettre le caniveau aux charges prévues.

Il peut s'avérer utile, à la fin, de protéger les grilles des résidus de béton pendant la coulée, en les couvrant d'un plastique ou en appliquant au pinceau un liquide antiadhérent spécial pour béton.

Une pose correcte augmente la durée et les fonctions hydrauliques du système en évitant toute rupture ou tout dysfonctionnement susceptible d'entraîner des contestations ou des accidents.

The Technodrain unit will therefore be supported by concrete with an R depth up to the height foreseen for final coating and the specific project.

It is important that the finished surface of the coating remains 3-5 mm above the out-flow surface of the grating.

The concrete coating should protect the sides of the finished grating surface with an adequate depth.

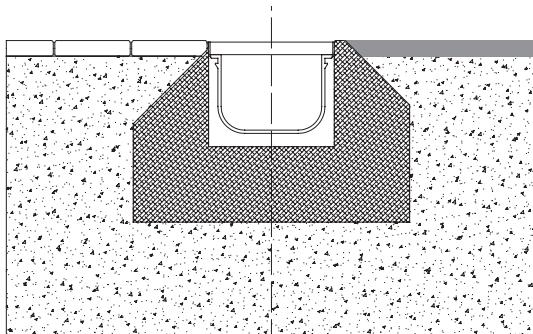

In the case of pavements subject to horizontal forces, it is necessary to arrange adequate dilation joints laterally to the drainage line, according to the design and at a minimum distance of 100 cm.

It is important that the concrete reach the required resistance before subjecting the channel to the expected loads.

It is important as far as the protection of the grating is concerned, to protect the grating from the residual concrete during casting, cover with a plastic film or apply concrete anti-stick liquid with the appropriate brush.

A correct installation increases the life and the hydraulic functionality of the system avoiding possible breakages and malfunctions that cause accidents and disputes.

TECHNODRAIN SYSTEM

Technodrain
neo

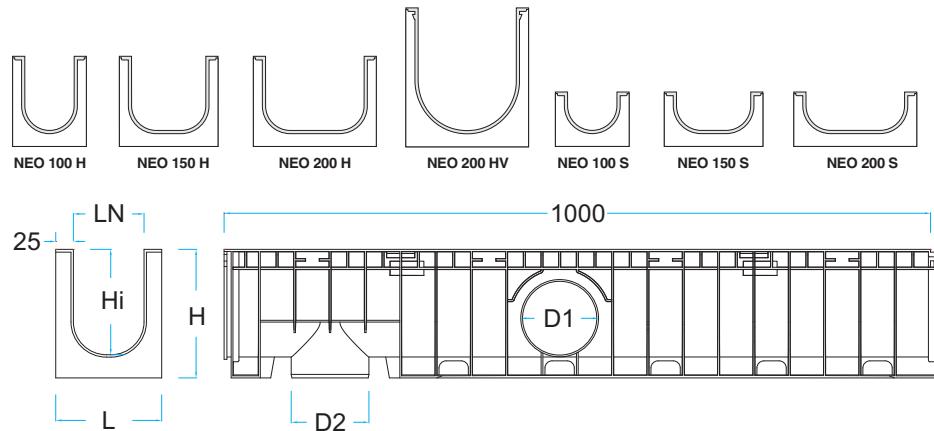

Le système **Technodrain Neo** est composé de:

- Caniveau en PE-HD à bord plat sans châssis de renforcement, couplé à des grilles dont les extrémités couvrent toute la surface du caniveau.
- Peut être utilisé pour des zones piétonnes, des parcs, des jardins, des pistes cyclables, des parkings de résidences.
- Idéal pour l'architecture urbaine et les solutions correspondant aux classes de charge supportées.
- Fixation grilles par barrettes.

The Technodrain Neo system is composed of:

- Body of channel in PE-HD with a flat edge and without a containing frame, furnished with a grating with extremities that cover the entire channel area.
- For use in pedestrian areas, parks and gardens, cycle paths and residential parking areas.
- Ideal for urban decoration and architectural solutions in the supported loading classes
- Fastening of gratings with tie bar

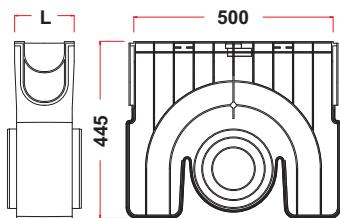

TABLEAU DIMENSIONNEL *Channels size*

| TYPE type | L | H | LN | H _i | D ₁ | D ₂ | |

TECHNODRAIN SYSTEM

- Le système **Technodrain Neomax** est composé de:
- Caniveau en PE-HD avec châssis en acier galvanisé, épaisseur 2 mm.
 - Hauteur châssis 7 mm.
 - Peut être utilisé avec les grilles en fonte ductile de la ligne Neo
 - Idéal pour parkings à plusieurs étages et entrées de garages dans résidences.
 - Fixation grilles par barrettes

The Technodrain Neomax system is composed of:

- Channel body in PE-HD with a galvanized steel frame, 2 mm depth.
- Height of frame 7 mm.
- Can only be used on ductile iron gratings of the Neo range
- Ideal for multi-storey car parks and garage entrances
- Fastening of grates with tie bars

TECHNODRAIN SYSTEM

Technodrain
evo

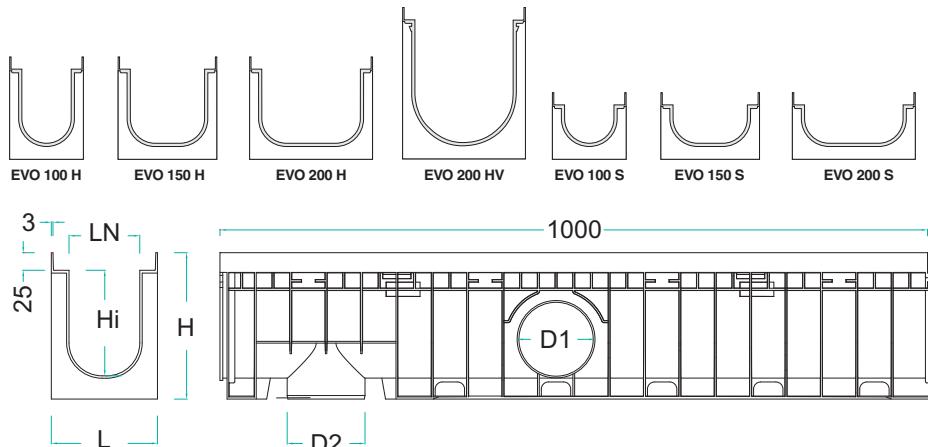

Le système **Technodrain Evo** est composé de:

- Caniveau en PE-HD avec bord de confinement épaisseur 3 mm.
- Hauteur bord 25 mm.
- Peut être utilisé avec des grilles en PE-HD
- Extrêmement adaptable, idéal pour les bricoleurs, les parkings, les parcs et jardins, les piscines et équipements sportifs
- Différents systèmes de fixation des grilles.

The Technodrain Evo system is composed of:

- Channel body in PE-HD including containing edge of 3 mm depth.
- Height of edge, 25 mm.
- Can be used with PE-HD gratings
- Extremely versatile, it is ideal for DIY, parking areas, parks and gardens, swimming pools and sporting installations.
- Various systems for fastening gratings

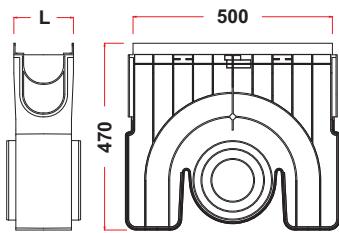

TABLEAU DIMENSIONNEL *Channels size*

| TYPE type | L | H | LN | H _i | D ₁ | D ₂ | |

Mesh 30x30 grating galvanized/s. steel

B 125 / C 250

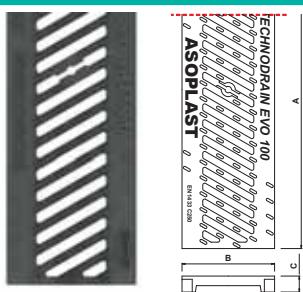

Gr. Caillebotis 30x10 acier galva/inox
Mesh 30x10 grating galv./s. steel

B 125

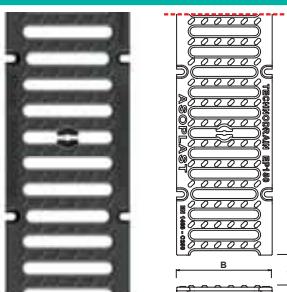

Grille maille fonte ductile
Ductile iron mesh grating

C 250*

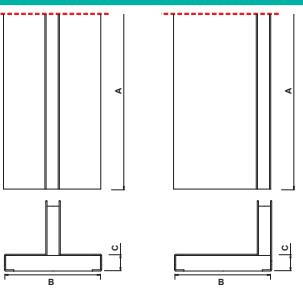

Grille fente 10 mm fonte ductile
Ductile iron grating (10mm slot)

C 250

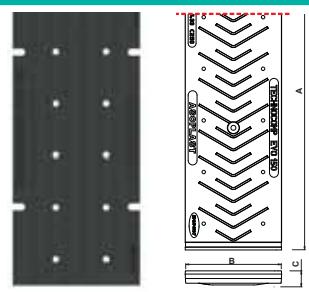

Grille fente 18 mm fonte ductile
Ductile iron grating (18mm slot)

C 250

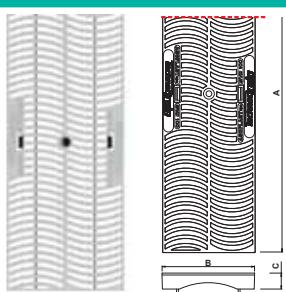

T L
Gr. profil à fente 18 mm acier galva
Galvanized Shaped Grating

C250

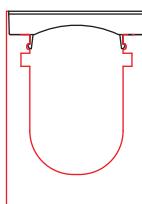

Couvercle compostage fonte ductile
Ductile iron cover for composting system

Grille Grating
PE-HD

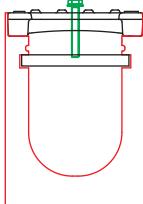

* Disponible pour les caniveaux 100H et 100S avec fente 6 mm / Also available with 6mm slot for the model EVO100H and EVO100S

Systèmes de fixation entre caniveaux et grilles EVO / Lock system between EVO channels and gratings

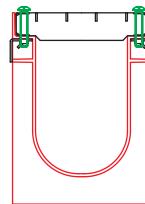

Fixation par élément élastique incorporé dans la grille, uniquement pour les grilles en PE-HD

Fastening with an elastic element incorporated into the grating, only for PE-HD gratings

Fixation par barrette et vis, pour les grilles(PE-HD, passerelle, caillebotis B125, fonte B125/C250). 2 barrettes pour le caniveau, 1 barrette pour l'avaloir.

Fastening by bar and screws, PE-HD, slotted, B125 mesh gratings, B125/C250 ductile iron. 2 bars for channel, 1 bar for sump.

Fixation par accessoire et vis: grille caillebotis C250 (4 par caniveau ou avaloir). Fonte C250 fente 18 mm (8 par caniveau, 4 pour avaloir)

Fastening by angle tool and screws: C250 mesh gratings (N. 4 for channel or sump) Ductile iron grating slot 18 mm(8 for channel, 4 for sump)

TECHNODRAIN SYSTEM

Le système **Technodrain Evomax** est composé de:

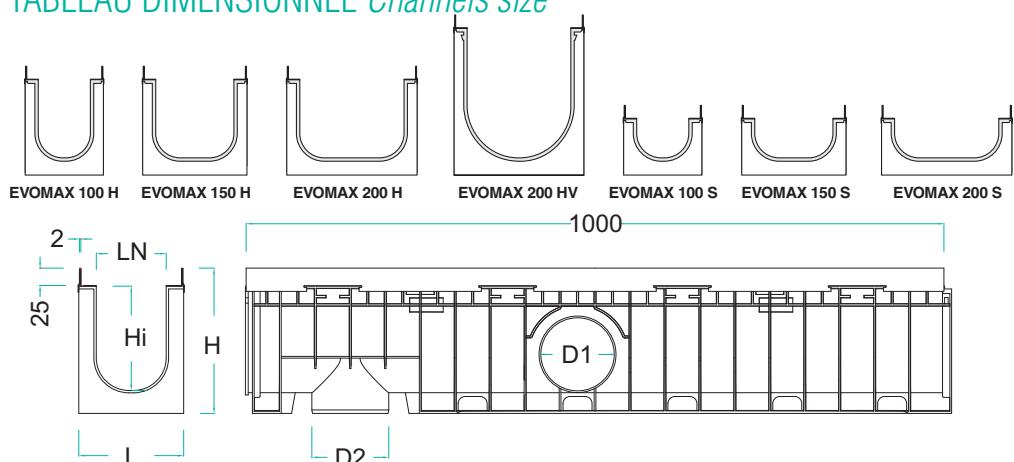

- Caniveau en PE-HD avec châssis en acier galvanisé ou inox, épaisseur 2 mm.
- Hauteur châssis 25 mm.
- Peut être utilisé avec des grilles Evo jusqu'à la classe C250.
- Idéal pour parkings et dalles autobloquantes.

The Technodrain Evomax system is composed of:

- Channel body in PE-HD with a stainless/galvanized steel frame, 2 mm depth
- Height of frame 25 mm.
- Can be used with Evo gratings up to the class C250
- Ideal for parking areas and brick pavements.

TECHNODRAIN SYSTEM

- Le système **Technodrain Exel** est composé de:
- Caniveau en PE-HD avec châssis en acier galvanisé ou inox, épaisseur 4 mm.
 - Hauteur châssis 25 mm
 - Peut être utilisé jusqu'à la classe F900
 - Idéal pour canalisations de routes, parkings.

The Technodrain Exel system is composed of:

- Channel body in PE-HD with a stainless/galvanized steel frame, 4 mm depth.
- Height of frame, 25 mm
- Can be used up to class F900
- Ideal for road drainage, crossings, parking and unloading areas for heavy vehicles, where the system has to support high loads linked with high crossing speeds

TECHNODRAIN SYSTEM

Le système **Technodrain Pro** est composé de:

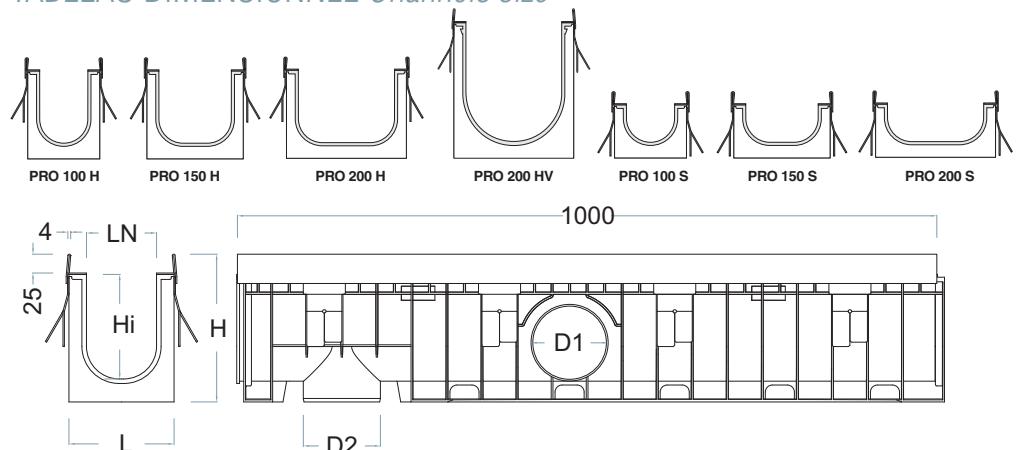

- Caniveau en PE-HD avec châssis en acier galvanisé ou inox, épaisseur 4 mm.
- Hauteur châssis 25 mm, avec des pattes latérales pour un meilleur ancrage au béton.
- Peut être utilisé jusqu'à la classe F900
- Idéal pour canalisations de routes, traversées, zones de stationnement et de déchargement pour véhicules lourds, lorsque le système doit supporter des charges élevées associées à des vitesses rapides de traversée.

The Technodrain Pro system is composed of:

- Channel body in PE-HD with a stainless/galvanized steel frame, 4 mm depth.
- Height of frame, 25 mm, equipped with side anchors to enhance the concrete anchorage.
- Can be used up to class F900
- Ideal for road drainage, crossings, parking and unloading areas for heavy vehicles, where the system has to support high loads linked with high crossing speeds

TECHNODRAIN SYSTEM

Le système **Technodrain Promax** est composé de:

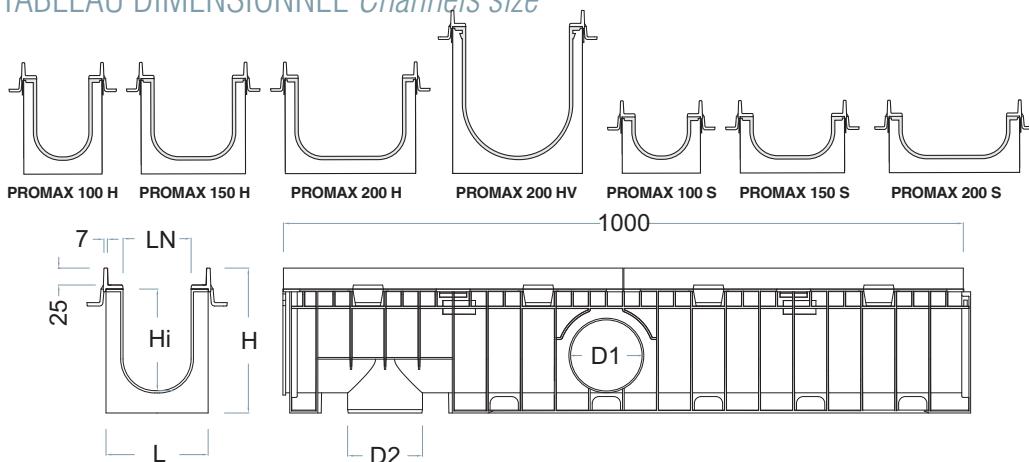

- Caniveau en PE-HD avec cornière fonte ductile, épaisseur 7 mm.
- Hauteur cornière 25 mm, équipé des pattes pour ancrage latérales .
- Peut être utilisé jusqu'à la classe F900
- Idéal pour autoroutes, zones industrielles et portuaires, zones de décharge et de stockage containers, aéroports

The Technodrain Promax system is composed of:

- Channel body in PE-HD with a heavy ductile iron frame, 7 mm depth.
- Height of frame, 25 mm, equipped with side anchors to enhance anchorage of concrete.
- Can be used up to class F900
- Ideal for motorways, industrial and port areas, container unloading and warehousing areas, airports

C 250

Le système **Technodrain Magnum City** est composé de:

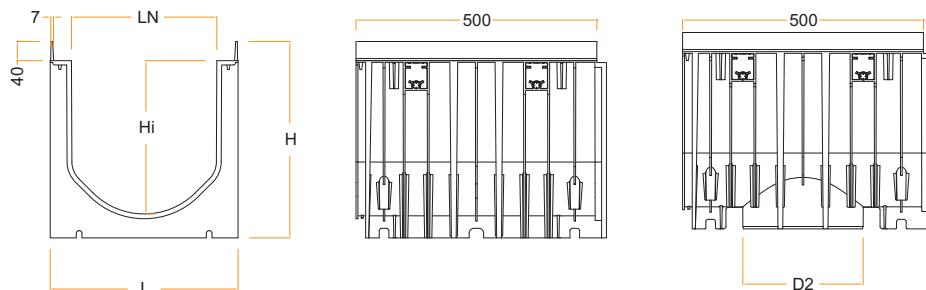

- Caniveau en PE-HD avec bord de confinement.
- Hauteur bord 40 mm
- Peut être utilisé dans des zones qui nécessitent une évacuation importante des eaux dans le cadre de la classe de charge C250.
- Peut être utilisé comme caniveau technique guide-câble grâce aux ancrages internes par étriers en acier.

The Technodrain Magnum City is composed of:

- Channel body in PE-HD including a containing edge.
- Height of edge, 40 mm
- Ideal for use in areas that require a high level of drainage in the C250 loading class.
- Can be used as a cable passage channel through the internal anchorage for metallic clips

TECHNODRAIN SYSTEM

Le système **Technodrain Magnum Traffic** est composé de:

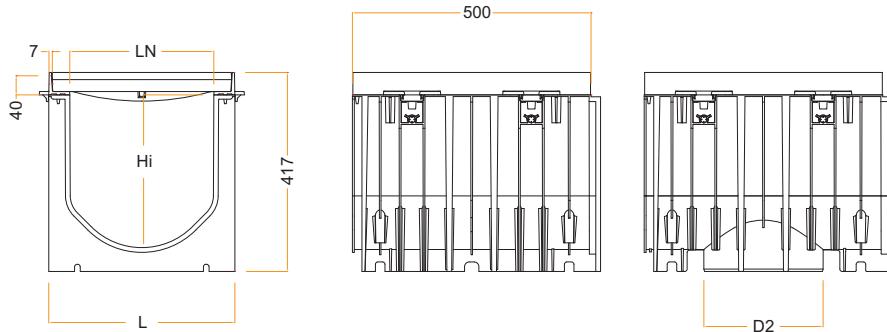

- Caniveau en PE-HD avec cornière fonte ductile, épaisseur 7 mm.
- Hauteur châssis 40 mm, avec équipée des pattes pour ancrage latérales.
- Peut être utilisé jusqu'à la classe F900.
- Idéal pour les autoroutes, les zones industrielles et portuaires, les zones de décharge et de stockage containers, les aéroports.
- Peut être utilisé comme caniveau technique guide-câble grâce aux ancrages internes par étriers métalliques avec couvertures jusqu'à la classe E600.

The Technodrain Traffic system is composed of:

- Channel body in PE-HD with a 7 mm heavy ductile iron frame.
- Height of frame, 40 mm, equipped with side anchors to enhance the anchorage of the concrete
- Can be used up to class F900
- Ideal for motorways, industrial and port areas, container unloading and storage zones, airports.
- Can be used as a cable passage channel through the internal anchorage for metallic clips, with covers up to E600 class.

| TYPE type | L | H | LN | Hi | D ₂ | |
|----------------|-----|-----|-----|-----|-----------------|----|
| MAGNUM TRAFFIC | 390 | 417 | 302 | 326 | 1xø200 - 1xø250 | 18 |

Toutes les dimensions sont en mm / all sizes are in mm

Gaine Technique

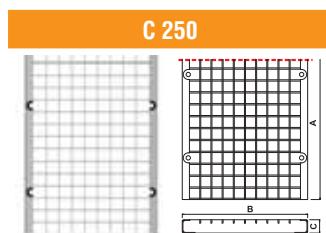

Le caniveau Magnum Traffic peut être utilisé comme gaine technique pour le passage de câbles et/ou canalisations.

Le kit de pattes pour passage de câbles permet la séparation et la fixation de divers types de réseaux.

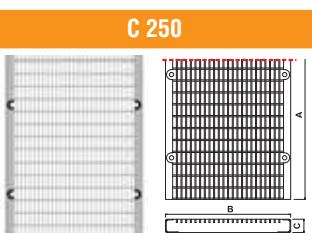

Cabling Channel

The magnum Traffic channel can effectively be used as a cable passage channel and consents the separation and fastening of several different types of service.

TECHNODRAIN SYSTEM

Le système Avaloir à siphon Technobox remplace avec succès les siphons traditionnels en béton grâce à ses nombreux avantages:

- Avaloir en PE-HD avec cornière fonte ductile, épaisseur 7 mm.
- Hauteur châssis 25 mm, équipé des pattes de anchage latérale pour un meilleur anchorage au béton.
- Produit complet et déjà assemblé pour une pose rapide et économique, système léger et incassable.
- Faible impact sur le réseau routier et haute capacité de drainage.
- Siphon interne démontable pour l'entretien intérieur.
- Filtre drisseur pour les feuilles et les détritus.
- Evacuation de sortie jusqu'au diamètre 200 mm.
- Peut être utilisé jusqu'à la classe F900.
- Idéal pour drainage bord de route et drainage ponctuel d'aires et de parkings.

The Technobox siphoned sump system successfully replaces the traditional concrete system thanks to its many advantages:

- Channel body in PE-HD with a heavy 7 mm ductile iron frame.
- Height of frame 25 mm, equipped with side anchors to enhance the anchorage of the concrete.
- Completed product and already assembled for a quick and economic installation, light and solid.
- Low impact on the road surface with a high drainage capacity
- Internal siphon, removable for cleaning
- Filter basket for leaves and detritus
- Drains up to 200 mm diameter
- Can be used up to class F900
- Ideal for roadside drainage and the punctual drainage of open areas and car parks.

- 1 Caahâssis en fonte ductile Ductile iron frame
- 2 Filtre drisseur pour feuilles et détritus Leaves and detritus collection basket
- 3 Déchets préformés Pre-cast drains
- 4 Couvercle siphon démontable Removable siphon cover

TECHNODRAIN SYSTEM

steel MAX

Le système Technodrain Steelmax constitue la nouvelle gamme Asoplast de caniveaux à grilles et à fente réalisés en acier inox Aisi 304, équipé d'accessoires tels que les avaloirs.

Grande facilité d'entretien et parfaite visibilité permettant une inspection attentive. Ils peuvent être réalisés sur mesure en fonction de la demande du client dans différentes dimensions et différents matériaux (même en acier galvanisé et Inox Aisi 316).

Idéal pour l'utilisation dans le secteur agroalimentaire comme:
Fromageries, Abattoirs, Industries de transformation et de conserves, Restaurants et cuisines, Caves.

Indispensable dans les secteurs: Hospitalier, Chimique, Pharmaceutique

The Technodrain Steelmax system is from the new Asoplast range of grated drains manufactured in Aisi 304 stainless steel, complete with accessories such as floor channel traps. Very easy to clean and completely viewable.

They can be manufactured according to the clients specifications in different sizes and materials (even galvanized steel and Aisi 316 stainless steel). Ideal for use in agricultural and food industry such as: cheese makers, slaughterhouses, food processing and preservation industry, restaurants and kitchens and cellars

Essential in: hospital, chemical, pharmaceutical sector

Fixation par élément élastique incorporé dans la grille.
Fastening using elastic element incorporated into the grating.

Fixation par barrette et vis.
Fastening by bar and screws.

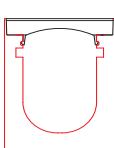

Fixation par accessoire et vis.
Fastening by angle tool and screws.

CONDITIONS GÉNÉRALES DE VENTE

Champ d'application

Vous déclarez avoir pris connaissance et accepté les présentes conditions générales de vente à travers l'envoi de votre commande. La commande est subordonnée à la confirmation de commande.

Délai de livraison

La livraison n'est pas contractuelle et le vendeur n'assume aucune responsabilité pour les dommages ou retards subis durant le transport des marchandises.

Livraison

La marchandise, même si vendue Franco Destination, voyage toujours aux risques et périls de l'acquéreur. Les éventuels dommages subis par a marchandise durant le transport doivent être signalés par écrit sur le bon de livraison à la réception de la marchandise, en précisant le type et la quantité des produits éventuellement endommagés.

Réclamation

Le fournisseur n'est en aucun cas responsable des conséquences directes ou indirectes tant sur les personnes que sur les biens d'une mauvaise utilisation ou d'un mauvais stockage des produits vendus par lui. Les éventuelles contestations regardant la qualité du produit devront être envoyées par écrit au moyen d'une lettre recommandée dans un délai de 8 jours dès la réception de la marchandise. La responsabilité du fournisseur se limitera à la substitution de la marchandise reconnue comme défectueuse par le Vendeur. Aucun dommage ne sera reconnu pour les frais de transport, d'installation et de dommages à tiers.

Paiements

Les ventes des produits sont payables dans les délais convenus et sont adressés à notre siège. L'intérêt légal sera dû en cas de retard de paiement.

Propriété de la marchandise

La marchandise devient la propriété de l'acquéreur seulement après le paiement intégral du prix fixé.

Compétence

Pour toute controverse susceptible de se présenter, le Tribunal compétent sera celui de Fermo, Italie.

GENERAL SALES CONDITIONS

Preamble

it is understood that the following general sales conditions are accepted by the client on placing the order. The order must be "approved by the supplier".

Delivery Terms

are not binding and no refund will be made in case of shipping delay.

Shipment

the goods always travel at risk and danger of the buyer even if sold free of carriage. The goods delivered by means of transport belonging to the supplier must be checked by the buyer on delivery and this should be stated on transport documents.

Claims

the supplier does not assume any responsibility regarding the use of sold goods. Claims regarding the quality of goods must be submitted within 8 days from receiving the goods by registered post. In any case we reserve the right to replace only the good that we (the supplier) acknowledge as faulty. No refund will be made for transport, installations, damages and injuries against third parties.

Payments

must be made available to our main office.

Should the date of payment of an invoice be overdue we shall charge interest.

The property

of the sold goods is transferred to the client by the supplier only after the payment of the invoice is completely settled.

Jurisdiction

Any dispute may be submitted to The Court of Tribunal in Fermo, Italy.
